Hepatitis
             The present sequence represents a fragment of a new Hepatitis g virus protein (see also W56441-50 for other fragments). RNA was synthesised from the serum of nine patients global positive for Hepatitis g virus and cDNA synthesised from this RNA. The CDNA was used as a template is several PCR reactions to isolate fragments of the new gene. The gene may be useful for diagnosing and developing treatments for Hepatitis

IMPORTANT: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate segments. Contig_ID: 00595 Length: 20679bp
Contig_ID: 00749 Length: 63415bp
Contig_ID: 01806 Length: 15932bp.
* consists of 5 contigs a 'working draft' sequence. It currently
* consists of 5 contigs The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
